

## Cash Flow

One of the most important things to measure is cash generated from operations each month, and I like to do this in two stages. The first stage is to turn the P&L into **Cash Generated from Operations**. The second step is to produce a statement that I call **Quick Cash Flow** – an approach which links the Profit and Loss and the Balance Sheet in a very effective fashion. [Click here](#) to complete your own analysis.

The goal here is to start with the Profit and Loss Statement and turn it into **Cash Generated from Operations**. Once that is done, you can overlay the balance sheet impact by bringing in the net working capital change and any balance sheet items that have a cash impact. The result is what I call **Quick Cash Flow**.

Remember, we're not creating "financial accounts" here for the IRS or the Bank to be used much later, but something to help the owner steer the ship and make mid-course corrections to avoid hitting the iceberg.

### **Cash Generated From Operations**

To arrive at first base, use accrual accounting to get to the "net profit" (or loss) figure.

Then make the following adjustments to non-cash expense numbers contained in the P&L that relate to the following:

- Add back non-cash items expensed but not paid in cash (depreciation, amortization, accruals etc)
- Add back any interest accrued but not paid Then apply the following adjustments for any cash payments that have been made that do not appear in the P&L.
- Deduct any payments made to banks for loan amortization (but not interest as that is already in the P&L)
- Deduct any other capital repayments

### **Quick Cash Flow**

*SOLUTIONS FOR BUSINESS OWNERS*

---

When you reach this point, it is time to deal with the balance sheet items and the following adjustments need to be made relating to movements in current assets/liabilities:

Deductions

- Deduct any increase in receivables
- Deduct any increase in inventory
- Deduct any reduction in payables

Additions

- Add any decrease in receivables
- Add any decrease in inventory
- Add any increase in payables

The resulting figure is **Quick Cash Flow** and should be tracked monthly.
